Create sitemap.xml

1) Navigate to: https://www.xml-sitemaps.com/
2) Add deployed project link into input field and click "start".
3) Click "view site map details".
4) Click "download your XML sitemap file".
5) Drag and drop XML file into project workspace in the root project folder (where the README is).
6) Ensure the name is saved as "sitemap.xml".

Create robots.txt file

1) In the root project folder, create a "robots.txt" file (exact name is important)
2) Add the below lines of text to the file and save. Note: the "Disallow" urls are optional and according to your preference of what you prefer robots to not have access to.
   > User-agent: *
   > Disallow: /accounts/
   > Disallow: /bag/
   > Sitemap: https://blossoming-bouquets.herokuapp.com/sitemap.xml
3) Git add and push to deployed site.
